What's an IQP Circuit?

An Instantaneous Quantum Polynomial (IQP for short) can be represented by

Figure: Shape of a generic IQP circuit

◆□▶ ◆□▶ ◆□▶ ◆□▶ ● ● ● ●

Where D is made out of diagonal 2 qubits gates

What's an IQP Circuit?

Precisely, D is made out of

▲□▶ ▲□▶ ▲ 三▶ ▲ 三▶ - 三 - のへぐ

In the Clifford+T fragment, $\alpha=k\frac{\pi}{2}$ and $\beta=k\frac{\pi}{4}$ for some $k\in\{0,1,2,...,7\}$

3

There is no gadget

Why Do We Care?

"Easy" to implement on a NISQ computer

▲□▶ ▲□▶ ▲□▶ ▲□▶ ▲□ ● のへぐ

- Hard to classically simulate
- Supremacy experiments?

Runnable on NISQ Machine?

All the gates commute

◆□▶ ◆□▶ ▲□▶ ▲□▶ □ のQ@

No time ordering \Rightarrow less noise

The sparse family can be compiled into a 2D lattice of depth $O(\sqrt{n}\log(n))$ Resilient to noise

Runnable on NISQ Machine?

All the gates commute

No time ordering \Rightarrow less noise

The sparse family can be compiled into a 2D lattice of depth $O(\sqrt{n}\log(n))$ Resilient to noise

◆□▶ ◆□▶ ◆□▶ ◆□▶ ● ● ● ●

Hard to classically Simulate

- Efficient weak simulation (up to a $\sqrt{2}$ multiplicative error) implies the collapse of PH
- Average case is hard to simulate within a small additive error¹ (implies the collapse of PH)
- even the sparse case is hard to simulate²

Quantum Supremacy?

Good properties for quantum supremacy³ How good is the classical simulation?

 $\begin{array}{ccc} & {\rm Dense} & {\rm Sparse} \\ {\rm Tensor\ contraction}^4 & O(n2^n) & O(\log n2^n) \\ {\rm Stabiliser\ decomposition} & O(n^32^{O(n^2)}) & O(n\log^2 n2^{O(n\log n)}) \end{array}$
